

Neutrik Connectors – The most common used with Audio Systems

Neutrik
#NL2FX

The Neutrik speakON cable connectors are the industry standard for amplifier and speaker connections. The NL2 and NL4 are the most common of the speakON connectors (but there are many types to choose from). Most power amplifiers and speaker cabinets are equipped with speakON chassis-type jacks. You should always verify if the speakON jack or connector is an NL2 or NL4 type, as they both look familiar but have a different number of poles. The NL2 “mates” with 4-Pole chassis connectors (if you only need 2-poles and a single speaker connection). Very reliable and easy to assemble.

“speakON”
Connectors

Neutrik
#NL4FC

The Neutrik #NL2FX is a 2-Pole cable connector with a current rating of 40A continuous. The Neutrik #NL4FC is a 4-Pole cable connector with chuck type strain relief for cables 4-20mm in diameter. The NL4FC can be used for a 2-Pole (1 speaker signal) or a 4-Pole (2 speaker signals) connection. The Current rating for this connector is 30A (amps) RMS continuous.

Neutrik
#NL2MDXX-H-3

These speakON panel mount connectors are the standard chassis connectors for loudspeaker, amplifier interconnections.

Features a unique metal locking system, makes contact only once fully locked.
